DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 17 and 18 are provides for the use of a portable streaming device (claim 17), or use of a method (claims 18), but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 17 and 18 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claims 17 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 10/539,029 Page 3

Art Unit: 2627

Claims 17 and 18 are further deemed improper because they do not further limit device or method, as set forth in claims 11 and 1.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Gibbs et al. (US 2002/0045961).

Gibbs et al. discloses the invention as claimed. Figs. 1-11 shows the portable device having memory (104 and 124), the processing unit (102) and storage device (126) being operatively connected with the memory under control of the processing unit, whereby the processing unit adaptive maximizes the size of the disk scheduler buffer memory (taken to be the buffer memory 124) within the memory of the device (see sections 0011, 0012, 0017, 0018, 0024, 0031, 0032, 0036 and 0050, which describes optimizing the buffer memory based on the response of the storage device, which

Art Unit: 2627

include the transfer rate, wake up period, etc. in order to allocate the number of buffers, size of each buffer etc., see for example section 0031), as set forth in claims 11-17.

The reference further teaches: the storage device includes optical disk or hard-disk drives (see section 0024), as set forth in claims 12 and 13; and the memory comprises non-volatile solid state memory not suffering to hot spots (see sections 0012 and 0018, which describes using a plurality of different type of buffer memory that also includes non-volatile solid state memory, which is believed to inherently include the ability of not suffering form hot spots), as set forth in claims 14 and 15.

Allowable Subject Matter

Claims 1-10 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record alone or in combination does not teach or suggest the method of controlling memory usage in a portable streaming device having the combination of elements and steps with their recited functions and process, along with continuously allocating available free memory in the portable streaming device and designating and using at least a portion of the allocated free memory as disk scheduler buffer memory, as set forth in claims 1-10.

Art Unit: 2627

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nanba (US 2005/0180269) and Gaertner et al. (6,339,811), both disclose a portable reproduction apparatus having the ability of controlling the memory usage of the device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MUHAMMAD N. EDUN whose telephone number is 571-272-7617. The examiner can normally be reached on FLEXITIME.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoa Nguyen can be reached on 571-272-7579. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
